Failed to set text into element (Root cause: org.openqa.selenium.WebDriverException: An unknown server-side error occurred while processing the command. Original error: Finding an element using a plugin is currently an incubating feature. To use it you must manually install one or more plugin modules in a way that they can be required by Appium, for example installing them from the Appium directory, installing them globally, or installing them elsewhere and passing an absolute path as the capability. Then construct an object where the key is the shortcut name for this plugin and the value is the module name or absolute path, for example: {"p1": "my-find-plugin"}, and pass this in as the 'customFindModules' capability.
